Turn The Tables On _____ Cyber Criminals & Win The Cyber War

Traditional prevention and detection methods are being bypassed and hence are more or less ineffectual. At the same time, cyber security is a matter of survival, and proactively fighting off intruders has become a business imperative.

RIDGEBACK'S APPROACH IS A DISRUPTIVE BREAK FROM TRADITIONAL RETROSPECTIVE, ANALYTICAL THREAT ASSESSMENT!

The Ridgeback Interactive Defense Platform is an enterprise security software platform that defeats malicious network invasion in real time. For any enterprise deploying Ridgeback's solutions, a network intrusion — malware propagation, an insider threats or a remotely directed exploits — encounters a network environment that appears to comprise, literally, billions of servers and other computing resources. The instant the intruder engages a phantom resource, Ridgeback provides options to eliminate or counter-engage the intruder.

Ridgeback takes the fight to the enemy using Interactive Defense and causes the adversary to fruitlessly exhaust resources. This aggressive strategy results in the cost of attack outweighing the benefits of attack.

Based on advanced Interactive Defense techniques, Ridgeback makes a significant positive impact on the major gaps in cyber security that arises from reliance on perimeter defenses like Firewalls, "after-the-fact" analysis - oriented intrusion detection technologies, and externally dependent and vulnerable endpoints protection schemes.

Ridgeback stands out in the market for two reasons - One for its ability to act within milliseconds on both cyber security and networking personnel from installation through operation and management. Numerous CEOs, CIOs and CISOs agree, there is no product in the market that accomplishes both!

Eliminate Cyber Threats In Real Time With
INTERACTIVE DEFENSE

REAL TIME SECURITY

Ridgeback Is Dynamic, Automated And Easily Scalable For Safe Counter-engagement In Any Network Environment. It Shifts The Cost Of Attack From Defender To Adversary. The Ridgeback Security Platform Defeats Malicious Network Invasion In Real Time.

COUNTERMEASURES SHIFT THE COST OF ATTACK TO THE BAD GUY

Every phantom resource acts as a landmine that triggers without the intruder's knowledge.

The threat is arrested in its tracks. The compromised device is automatically taken off line.

The intruder is sent confusing and irritating information, like playing 20 questions but Ridgeback answers 'Yes' to every question.

For National Security users, an open connection back to the intruder presents offensive opportunities.

"We like the idea of the hacker being in the room full of precariously placed glass and then flipping the lights out on them to wait for the smashing and associated SOC alerts.... a force to be reckoned with."

– Ridgeback User
